CERTIFICATE OF COMPLETION

THIS IS TO VERIFY
THAT "COURIER
MANAGEMENT SYSTEM"
TEAM MEMBERS HAVE
SUCCESSFULLY
COMPLETED THEIR 2ND
SEMESTER END PROJECT
ON "COURIER"
SUBMISSION:
SUBMITTED TO APTECH
COMPUTER EDUCATION
ON 22-2-2026

OBJECTIVES OF THE PROJECT

“The main objective of this Courier Management System is to develop a web-based application that automates manual courier operations. The system provides role-based access to Admin, Agents, and Users with features including real-time consignment tracking, automated billing, SMS notifications, customer management, and Excel report generation. It aims to eliminate manual record-keeping challenges, reduce operational costs, improve customer satisfaction through self-tracking, and provide branch-wise management capabilities. The system ensures data security, fast processing, and user-friendly interface for all stakeholders.”

PROBLEM STATEMENT:

Courier management system is currently handled manually by the organisation and facing various challenges in maintaining records and providing information to its customers. Tracking and handling of couriers is becoming tedious for the organisation.

EXISTING SYSTEM

ANALYSIS

Current System: Manual

Problems:

- Manual record keeping
- No tracking system
- No SMS alerts
- Paper bills
- No reports
- Slow searching

Need: Web-based automated system

PROPOSED SYSTEM

Solution: Courier Management System (Web App)

Features:

- Online tracking
- Automated billing
- SMS notifications
- Excel reports
- Role-based access (Admin, Agent, User)
- Digital record keeping

Benefit: Fast, secure, paperless

CUSTOMER SPECIFICATIONS

- **FUNCTIONAL REQUIREMENTS:**

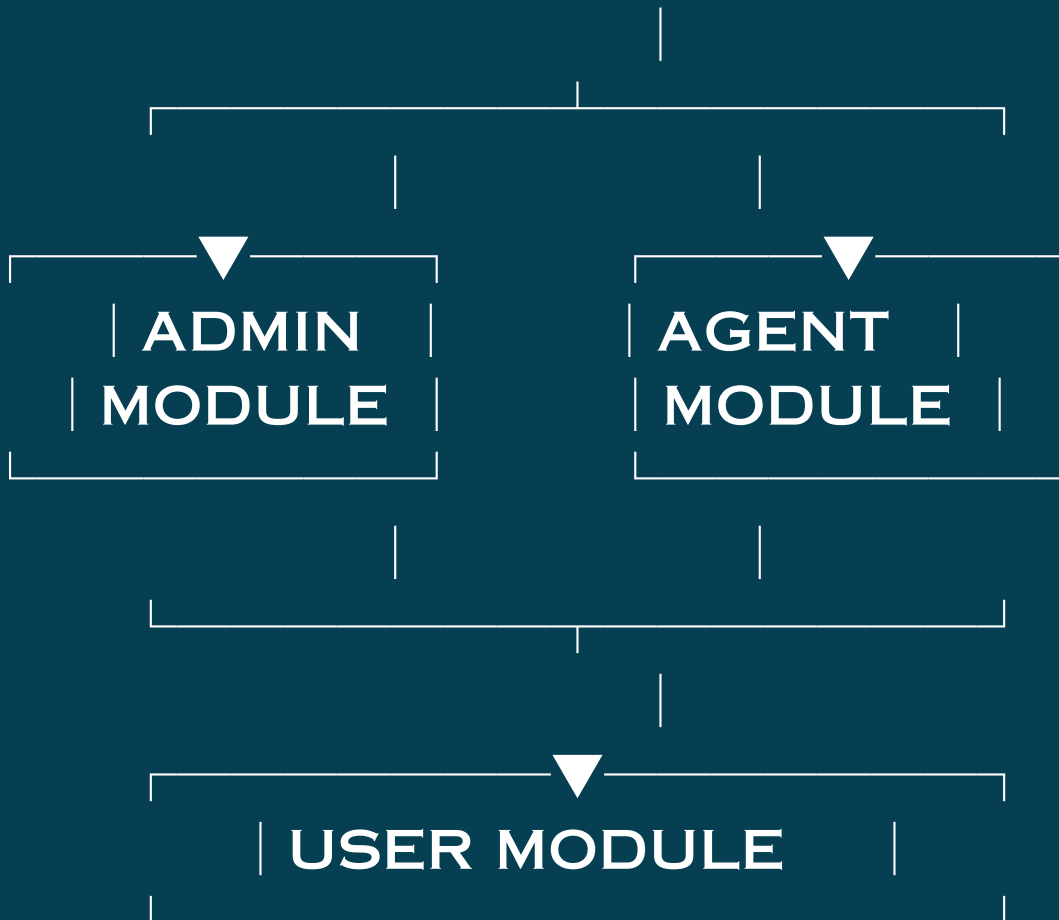

Requirement	Description
Login System	Admin, Agent, User login with username & password
Add Courier	Admin/Agent can book new courier
Track Courier	User can track by consignment number
Update Status	Admin/Agent can update delivery status
Generate Bill	Automatic bill on courier booking
Send SMS	SMS on booking & delivery
View All Couriers	Admin view all, Agent view branch only
Download Reports	Excel reports (Date-wise, City-wise)
Print Status	User can print tracking details
Manage Agents	Admin can add/edit/delete agents
Status Count	View total, in-progress, delivered shipments
Logout	Secure logout from system

• NON-FUNCTIONAL REQUIREMENTS:

Requirement	Description
Security	Password protected, role-based access
Performance	Page load less than 3 seconds
Usability	Easy to use, no training needed
Compatibility	Works on Chrome, Firefox, Edge
Reliability	99% uptime
Scalability	Can add more branches in future

SYSTEM MODULES OVERVIEW

COURIER MANAGEMENT SYSTEM

ADMINISTRATOR MODULE

• FEATURES:

Feature	Description
Login	Admin login with username & password
Dashboard	View total, in-progress, delivered shipments count
New Courier	Add new courier booking
View All Couriers	View all shipments of all branches
Update Courier	Edit courier details
Delete Courier	Remove courier record
Create Agent	Add new agent city-wise
Manage Agent	View/Edit/Delete agents
Manage Customers	View/Search customer details
Send SMS	Send SMS notifications
Send Delivery SMS	Send SMS on delivery
Status Count	View all locations status
Download Report	Excel report (Date-wise, City-wise)
Logout	Secure logout

AGENT MODULE

- **FEATURES:**

Feature	Description
Login	Branch-wise login credentials
Dashboard	View branch status counts
New Courier	Add new courier for branch
View Couriers	View only branch couriers
Update Courier	Edit branch courier details
Send SMS	Send SMS from/to location
Send Delivery SMS	Delivery notification SMS
Branch Status	View only his branch status
Download Report	Branch-wise Excel report
Logout	Secure logout

USER MODULE

- **FEATURES:**

Feature	Description
Register	Create new account
Login	Access user dashboard
Track Consignment	Search by tracking number
View Status	Check current shipment status
Print Status	Print tracking details
Logout	Secure logout

HARDWARE/SOFTWARE REQUIREMENTS

- **HARDWARE:**

A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better 128 Megabytes of RAM or better

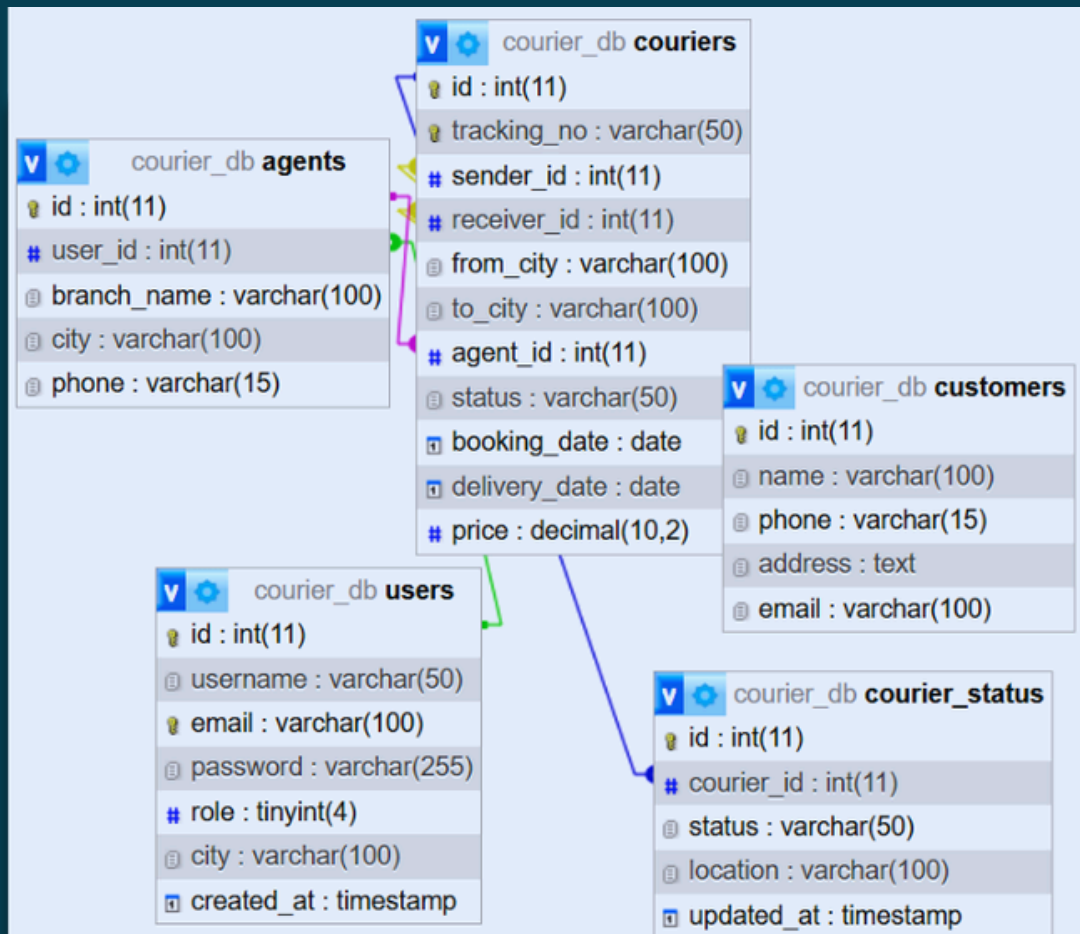

OPERATING SYSTEM:

LINUX/Windows 2000 Server (or higher if possible)

- **SOFTWARE:**

- PHP
- MySQL
- Apache

DATABASE DESIGN

IMPLEMENTED

ALGORITHMS

```
config > db.php > ...
1  <?php
2  $host = "localhost";
3  $user = "root";
4  $pass = "";
5  $dbname = "courier_db";
6  $conn = new mysqli(hostname: $host, username: $user, password: $pass, database: $dbname);
7
8  if ($conn->connect_error) {
9      die("Connection failed: " . $conn->connect_error);
10 }
11 ?>
```

```
<body class="bg-light">

CONCLUSION

The Courier Management System has been successfully designed and implemented as a web-based application using PHP and MySQL. The primary objective of this project was to automate manual courier operations and provide a secure, efficient, and user-friendly platform for managing courier services.

The system replaces traditional paper-based record keeping with a centralized digital database, ensuring better accuracy, faster processing, and improved data security. It provides role-based access control for Administrator, Agent, and User, allowing each stakeholder to perform their respective tasks efficiently.

Key features such as real-time consignment tracking, automated billing, SMS notifications, report generation, and branch-wise management significantly enhance operational productivity and customer satisfaction.

Through proper database design, structured modules, authentication mechanisms, and validation processes, the system ensures reliability, performance, and scalability for future expansion.

Overall, the Courier Management System successfully fulfills all functional and non-functional requirements and serves as a practical solution for modern courier service management.
